Nutraceutical Botanical Extraction and Formulation

SwissMixIt: Micro Botanical Oil Extractor and formulation system using the most advanced induction mixing technology. From farm to table, this oil extractor is perfect for full spectrum hemp and other nutraceutical and essential oil botanicals using the latest green extraction technology. The same mixing technology can also be used to deploy your botanical extraction into a DIY skin cream.

The Boutique shopping is now open, and you can buy ingredients. The mixer will be available shortly.

Skin Health

Frequently asked questions about DIY at-home extraction, oil infusion, and skin cream production.

Base: Start with a standard, well performing skin cream. For this, keep it simple. I recommend our standard formulation of skin cream: Rice Bran oil, bees wax, Shea butter, Mango butter, and distilled water (you may add some Monoi oil for scent).

Cover Oil: Infused oil. Start with a good carrier oil like Rice Bran oil, Olive oil, Walnut oil, or Avocado oil. Then add your choice of nutraceuticals (Amla, Black Seed, Aloe, Vanilla, Oregano, Coffee, etc.). The botanicals will naturally extract using the induction mixer system with SwissMixIt and the carrier oil draws out the essential oils and terpenes (flavonols).
